Data Exploration and Preprocessing Template

| Section | Description |
|------------------------|--|
| Data Overview | <p>In description we applied df.describe and we have counted number of columns, mean, min, max, standard deviation</p> <p>Shape of datasets</p> <p>amd (11235, 7)</p> <p>asus (6167, 7)</p> <p>Intel (11235, 7)</p> <p>msi (298, 7)</p> <p>nvidia (6470, 7)</p> <p>For all datasets there are 7 columns which are date, open, high, low, close, adj close, volume and there datatypes are object, float and integers</p> |
| Univariate Analysis | N/A |
| Bivariate Analysis | <p>Code dynamically creates a grid of subplots based on the number of columns in the df_plot DataFrame, plots each time series on a separate subplot using Seaborn's lineplot(), and configures the appearance of the plot for readability and aesthetics. It's a concise and effective way to visualize multiple time series of stock data simultaneously.</p> |
| Multivariate Analysis | N/A |
| Outliers and Anomalies | <p>In the datasets of asus there are 123 outliers and we have handled the null values with the help of dropna function</p> |

Data Preprocessing Code Screenshots

Loading Data

```
Click to add a breakpoint | le dataframes
2  amd = pd.concat([amd_1980_2023, amd_2023_2024], axis=0)
3  amd
```

| | Date | Open | High | Low | Close | Adj Close | Volume |
|-----|------------|------------|------------|------------|------------|------------|----------|
| 0 | 1980-03-18 | 0.000000 | 3.125000 | 2.937500 | 3.031250 | 3.031250 | 727200 |

235 rows x 7 columns

Handling Missing Data

```
1  asus.isnull().sum()
```

| Date | 0 |
|-----------|-------|
| Open | 123 |
| High | 123 |
| Low | 123 |
| Close | 123 |
| Adj Close | 123 |
| Volume | 123 |
| dtype: | int64 |

```
1  asus.dropna(inplace=True)
```

Data Transformation

N/A

Feature Engineering

```
1  # Changing dates to timestamps
2  datal=[amd,asus,Intel,msi,nvidia]
3  for data in datal:
4      data['Date']=pd.to_datetime(data['Date'])
```

Save Processed Data

```
import numpy as np
datal=[amd,asus,Intel,msi,nvidia]
names=[0,1,2,3,4]
index=0
for data in datal:
    dates= data['Date']
    data['Company']= np.repeat (names[index], len(data))
    data['Year']=dates.dt.year
    data['Month']= dates.dt.month
    data['Day']= dates.dt.day
    index+=1
```
